

# Wireless 2-fold transmitter module FSM61-UC

**valid for devices from production week 12/09**

(see bottom side of housing)

Wireless 2-fold transmitter module. With internal antenna. No standby loss. For installation. 45 mm long, 55 mm wide, 18 mm deep.

The wireless transmitter module FSM61-UC has two channels and, like a wireless pushbutton, it can transmit wireless telegrams into the Eltako wireless building. A1 initiates a wireless telegram like 'press rocker above' of a wireless pushbutton with one rocker and A3 like 'press rocker below'.

Several wireless transmitter modules must not be switched at the same time.

If the terminals A1 and A3 are connected with a bridge, the wireless telegram is transmitted from A3, as long as the control voltage is applied, e.g. for central commands with priority.

The universal control voltage processes control commands of 8 to 253 V AC or 10 to 230 V DC with periods lasting min. 0.2 seconds. Max. parallel capacitance (approx. length) of control lead at 230 V 0.5 nF. This corresponds to a length of approx. 2 meters.

**No permanent power supply required, therefore no standby losses.**

## Typical connection

## Important reminder!

**This electrical equipment may only be installed by skilled electricians otherwise fire hazard or danger of electric shock exists!**
