

FBH55

Wireless motion/brightness sensor for integration in the 55x55 mm and 63x63 mm switch system.

Power supply either with solar cell module FSZ55 or with switching power supply unit SNT61-230V/12V DC.

The scope of supply includes a frame R, an intermediate frame ZR in the same colour, a mounting plate and an adhesive film. In addition, an intermediate frame ZRF in the same colour is supplied for installation in an existing frame R1F, R2F or R3F for flat pushbuttons. The switch mode power supply SNT61-230V/12V DC must then provide the power supply.

The motion/brightness sensor FBH55 requires no installation depth behind the mounting plate. It transmits a message to the Eltako wireless network every 100 seconds if the brightness changes by min 10 lux. If the sensor detects motion, it sends a signal twice immediately.

The switch-off signal is sent after the off delay which has a fixed setting of 1 minute. If there is no change, a status message is sent every 20 minutes.

When teaching-in actuators, the switching threshold is defined for switching the light on/off depending on the brightness. Additional variables are also taught-in on the FKRI2.

When an FBH detects movement, switching takes place then and time delay only starts when all FBHs taught-in in an actuator detect no more movement.

* The bottom of the housing is matt.
