## Universal dimming actuator IP EUD62NPN-IPM/110-240V

**Only skilled electricians may install this electrical equipment otherwise there is the risk of fire or electric shock!**

Temperature at mounting location:

-20°C up to +50°C.

Storage temperature: -25°C up to +70°C.

Relative humidity:

annual average value <75%.

### ELTAKO Connect App download:

<https://eltako.com/redirect/eltako-connect>

**Universal dimming actuator IP via Wi-Fi.**  
**Matter-certified, REST-API. With power MOSFET. Dimmable 230 V LED lamps in 'phase cut-off' mode up to 300 W or in 'phase control' mode up to 100 W depending on ventilation conditions. 230 V incandescent lamps and halogen lamps up to 300 W depending on ventilation conditions. No minimum load. Only 0.7 watt standby loss.**  
For installation. 49 x 51 mm wide, 25 mm deep.  
**The terminals are plug-in terminals for conductor cross-sections of 0.2 mm<sup>2</sup> to 2.5 mm<sup>2</sup>.**

**Zero passage switching with soft ON and soft OFF to protect lamps.**

Supply voltage, switching voltage and control voltage local 110-240 V.

The brightness level is stored on switch-off (memory).

If supply voltage fails, the device is switched off in defined mode.

Automatic electronic overload protection and overtemperature switch-off.

With control input for a mains voltage control button that may be installed in front of it.

Glow lamp current is not permitted.

This actuator is Matter certified and can therefore be taught-in into different ecosystems and operated in parallel.

### Typical connection

### First setup with Apple Home:

■ Only 2.4 GHz Wi-Fi frequency bands are supported.

■ Recommended: Commissioning close to the main router.

1. Apply mains voltage and wait for the signal tone.
2. Wait 15 seconds until the device has started.
3. Open the Apple Home app.
4. In the upper right corner press the '+' symbol and select 'Add device'.
5. Scan the Matter QR code. It can be found on the back of the device and on the QR code card in the packaging.
6. The Apple Home app will guide you through the remaining steps.

### First set up with Google Home:

■ Only 2.4 GHz Wi-Fi frequency bands are supported.

■ Recommended: Commissioning close to the main router.

1. Apply mains voltage and wait for the signal tone.
2. Wait 15 seconds until the device has started.
3. Download and open the Google Home app.
4. Click on 'Devices' at the bottom of the screen.
5. Press '+ Add' in the bottom right corner.

6. Now click on 'New device'.

7. The Apple Home app will guide you through the remaining steps.

### First setup with Amazon Alexa:

■ Only 2.4 GHz Wi-Fi frequency bands are supported.

■ Recommended: Commissioning close to the main router.

1. Apply mains voltage and wait for the signal tone.
2. Wait 15 seconds until the device has started.
3. Download and open the Amazon Alexa app.
4. Click on 'Devices' at the bottom of the screen.
5. In the bottom right corner press the '+' symbol and select 'Add Device'.
6. Click on your automatically recognised ELTAKO device.
7. The Amazon Alexa app will guide you through the remaining steps.

### Important!

If an update is available and the device is idle, the installation will occur immediately, followed by a device restart.

### Factory reset:

3 short and 3 long beeps will beep to confirm the reset:

#### Option 1:

Via the ELTAKO Connect app.

#### Option 2:

1. Apply supply voltage (time window of 5 minutes begins)
2. Connected switch/button: press **8x briefly (<1 sec.) and 1x long (>1.5 sec. and <5 sec.)**. A signal tone sounds for the last two short closing actions. The reset confirmation beeps are delayed by 15 seconds with this option.

**Outside of the time window, the device is simply restarted!**

#### Option 3:

1. The device is disconnected from the supply voltage.
2. Apply supply voltage, wait for the **signal tone** and disconnect the supply voltage within **5 seconds**.
3. Repeat **step 2** a total of **5 times**.
4. The **sixth time** the supply voltage is **switched on**, the successful factory reset is confirmed by **3 short and 3 long beeps**.

Over-the-Air (OTA) Firmware Updates:

- If the device is connected to the Internet, it will immediately search for possible updates. Updates are then requested cyclicly every 12 hours.
- Data transfer between the ELTAKO update server and the device meets the highest security standards.
- Before an update is installed, it is checked whether it is correctly encrypted, validated and undamaged.
- Updates are downloaded and installed, but only activated when no important process is running and no load is switched. The restart required for this takes a few seconds and goes unnoticed.
- If an update fails or leads to device instability, the system automatically switches back to the previous firmware version and waits for a new update.

Offline firmware updates:

The device supports offline firmware updates via REST API. More information on this on the product website.

Technical data

|   |   |
|---|---|
| Dimmable<br>230 V LED lamps                               | Trailing edge<br>up to 300 W <sup>5)</sup><br><br>Leading edge<br>up to 100 W <sup>5)</sup> |
| Incandescent and<br>halogen lamps <sup>1)</sup> 230 V (R) | up to 300 W   |
| Inductive<br>transformers (L)                             | up to 300 W <sup>2)3)</sup>   |
| Electronic<br>transformers (C)                            | up to 300 W <sup>2)3)</sup>   |
| Dimmable energy saving<br>lamps ESL                       | up to 300 W <sup>5)</sup>   |
| Max./min. temperature<br>at mounting location             | +50°C/-20°C <sup>4)</sup>   |
| Standby loss (active power)                               | 0.7 W   |

<sup>1)</sup> Applies to lamps of max. 150 W.

<sup>2)</sup> Per dimmer it is only allowed to use max. 2 inductive (wound) transformers of the same type, **further-more no-load operation on the secondary part is not permitted. The dimmer might be destroyed.** Therefore do not permit load breaking on the secondary part. Operation in parallel of inductive (wound) and capacitive (electronic) transformers is not permitted!

<sup>3)</sup> **When calculating the load a loss of 20% for inductive (wound) transformers and a loss of 5% for capacitive (electronic) transformers must be considered in addition to the lamp load.**

<sup>4)</sup> Affects the max. switching capacity.

<sup>5)</sup> Usually applies for dimmable energy saving lamps and dimmable 230V LED lamps. Due to differences in the lamps electronics, there may be limited dimming range, switch on and off problems dependent on the manufacturer and a restriction on the maximum number of lamps; especially if the connected load is very low (for 5 W-LEDs).
