

Wireless transmitter module FSM61-UC

valid for devices until production week 11/09
(see bottom side of housing)

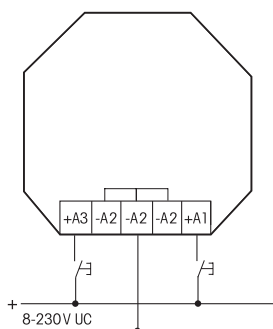

For installation and surface mounting.
45 mm long, 55 mm wide, 18 mm deep.

The wireless transmitter module FSM61-UC has two channels and, like a wireless pushbutton, it can feed local and central control signals into the Eltako wireless network. The signal on opening the two control contacts is identical.

The universal control voltage processes control commands of 8 to 230 V UC with periods lasting min. 0.2 seconds. Max. parallel capacitance (approx. length) of control lead at 230V 0.5 nF. This corresponds to a length of approx. 2 meters.

**No permanent power supply required,
therefore no standby losses.**

Typical connection

Important reminder!

This electrical equipment may only be installed by skilled electricians otherwise fire hazard or danger of electric shock exists!
