

Tap-radio® universal dimming
actuator adapter

TF100D-230V

Ambient temperature:

0°C up to +35°C.

Storage temperature: -25°C up to +70°C.

Relative humidity:

annual average value <75%.

Wireless universal dimming actuator adapter. 100x55x45 mm (measurements without plug), pure white glossy. With power MOSFET. 230V incandescent lamps and halogen lamps up to 300W, 230V LEDs up to 100W. No inductive (wound) transformers. With children's rooms and snooze function.

No minimum load. Standby loss only 0.7 watt.

Adapter for German fused safety sockets.

Up to 24 wireless universal pushbuttons, wireless direction pushbuttons, wireless central control pushbuttons and motion sensors TF-BSB as well as bidirectional wireless can be taught in using easy tap-radio® technology.

During teach-in, the dimming actuator can be set to phase control to permit optimum dimming for various LED lamps.

Bidirectional wireless switchable.

Zero passage switching with soft ON and soft OFF to protect lamps.

Supply voltage and switching voltage 230V.

No minimum load.

The brightness level is stored on switch-off (memory).

If supply voltage fails, the device is switched off in defined mode.

When switched on for the first time, the device is at maximum brightness.

Automatic electronic overload protection and overtemperature switch-off.

Start-up:

After plugging the device into the socket the teach-in mode is automatically active for 2 minutes provided the memory content is empty (as-delivered state) and/or the teach-in mode is not blocked.

Readiness for teach-in is indicated by the lamp briefly switching on/off.

Teach in wireless pushbutton:

Universal pushbutton: tap briefly 3 times;

Direction pushbutton: tap briefly 4 times;

Direction pushbutton teach-in is fully automatic when the pushbutton is tapped. Where you tap is then defined as switch-on. The other side automatically becomes switch-off.

Central control pushbutton On:

Tap briefly 5 times;

Central control pushbutton Off:

Tap briefly 6 times;

Wireless motion sensor TF-BSB:

teach-in telegram 0x1C080D80;

GFVS: Teach-in telegram 0xE0400D80;

this automatically switches on confirmation telegrams.

After teaching-in a pushbutton, teach-in is confirmed by the lamp switching on/off briefly; the teach-in mode is active for a further 2 minutes. If no action occurs for 2 minutes, the teach-in mode ends automatically. This is indicated by the lamp briefly switching on/off.

To prevent accidental teach-in, block the teach-in mode immediately after teaching in all the wireless push-

Block teach-in mode:

Tap 3 times briefly and once long (>1 second) on a wireless pushbutton that is already taught in.

A block is indicated by the lamp switching on/off briefly twice.

Unblock teach-in mode:

1. Unplug or plug in the adapter.

2. Tap 4 times briefly and once long (>1 second) on a wireless pushbutton already taught in (not a central command pushbutton).

Readiness for teach-in is indicated by the lamp briefly switching on/off.

3. Apply on 'Teach in wireless pushbutton'.

Clear memory content completely (restore as-delivered state):

1. Unplug or plug in the adapter.
2. Tap 8 times briefly and once long (>1 second) on a wireless pushbutton already taught in (not a central command pushbutton).

Clear is indicated by the lamp briefly switching on/off.

3. Apply on 'Teach in wireless pushbutton'.

Adjust and save minimum brightness:

1. Unplug or plug in the adapter.
2. If necessary, unlock the teach-in mode.
3. Set the required minimum brightness using a taught-in wireless pushbutton (not central command pushbutton).
4. Tap 2 times briefly (not central command pushbutton) on a wireless pushbutton that is already taught in. Save is indicated by the lamp briefly switching on/off.
5. Block teach-in mode.

The wireless dimming actuator is a universal dimming actuator when it is in factory setting (AUTO) and dims with phase cut-off or phase control depending on the connected load.

With various 230V LED lamps, the dimming function improves when dimmed with phase control.

Switch over to phase control:

1. Unplug or plug in the adapter.
2. Tap 5 times briefly and once long (>1 second) on a wireless pushbutton already taught in (not a central command pushbutton).

Phase control is indicated by the lamp switching on/off briefly three times.

Switch over to AUTO:

1. Unplug or plug in the adapter.
2. Tap 6 times briefly and once long (>1 second) on a wireless pushbutton already taught in (not a central command pushbutton).

Phase control is indicated by the lamp switching on/off briefly four times.

Switch-on or -off confirmation telegrams:

1. Unplug or plug in the adapter.

2. Tap 7 times briefly and once long (> 1 second) on a wireless pushbutton already taught in (not a central command pushbutton).

ON is indicated by the lamp switching on/off briefly twice.

OFF is indicated by the lamp briefly switching on/off.

Direction pushbutton:

'Switch on and dim up' on one side and 'Switch off and dim down' on the other side.

A double-click on the switch on side triggers the automatic dimming up to full brightness.

Universal pushbutton:

Short commands switch on/off, continuous activation changes brightness up to maximum value. If you interrupt activation, it changes the dimming direction.

Switching operation for children's rooms

(universal pushbutton or direction pushbutton on the switch-on side): If the light is switched on by holding down the pushbutton, it starts at the lowest brightness level after approx. 1 second and dims up slowly as long as the pushbutton is held down without modifying the last stored brightness level.

Snooze function (universal pushbutton or direction pushbutton on the switch-off side): With a double impulse the lighting is dimmed down from the current dimming position to the minimum brightness level and switched off. The current dimming position as well as the adjustable minimum brightness level determine the dimming time (max. = 60 minutes) which can be reduced as required. It can be switched off at any time by short-time control commands during the lighting is dimmed down.

Semi-automatic motion detection with taught-in TF-BSB wireless motion sensor (factory setting):

Press the pushbutton to switch on. This starts a release delay time of 5 minutes during which the device switches on again if motion is detected. When motion is no longer detected, the device switches off automatically after 5 minutes. The actuator then responds to motion for a

further 5 minutes before switching off automatically. After this time expires, the device must be switched on again by pressing the pushbutton. The device can be switched off at any time by pressing the pushbutton, but then motion is no longer detected.

Fully automatic motion detection with TF-BSB taught-in wireless motion sensor:

If the actuator is not to switch on automatically when motion is detected, e.g. in rooms without daylight, replug the jumper to 'active' on the TF-BSB device. When motion is no longer detected, the device switches off automatically after the 5 minute release delay time expires. Press the pushbutton at any time to switch the device on or off. When motion is detected, the device switches on again automatically.

When controlled via the GFVS software, light scenes can be set and retrieved.

Technical data

Incandescent and halogen ¹⁾ lamps 230V (R)	up to 300W ²⁾
Inductive transformers (L)	–
Electronic transformers (C) up to 300W ²⁾³⁾	–
Dimmable energy saving lamps ESL	–
Dimmable 230V LEDs	up to 100W ²⁾
Ambient temperature	0°C up to +35°C ⁴⁾
Standby loss (activ power)	0.7W

¹⁾ For lamps with 150W max.

²⁾ The switching capacity is dependent on the ventilation conditions.

³⁾ **When calculating the load, take into account 5% loss in addition to lamp load for capacitive (electronic) transformers.**

⁴⁾ Influences maximum switching capacity.

May only be used in closed dry rooms.

The socket must be easily accessible.
