

## **Eltako – The Wireless Building**

The home supports its residents through all aspects of life – from childhood to senior friendly living!

*Comfort right from  
the beginning !*

## Here are the highlights at a glance

- Light switches can be fixed anywhere
- Comfort functions easy to integrate
- Retrofittable at any time
- Perfect solution when renovating or modernising

*Just the way  
I want it*

The Eltako Wireless pushbuttons can be easily fixed to walls, glass or furniture thanks to wireless technology. In fact, anywhere you need them. Or you can simply integrate the wireless pushbuttons into your existing switch range.

Modern building services not only meet today's claims, but also future demands on comfort, safety and energy efficiency requirements.

From the basic functions of lighting, shading and heating to a software-based control all your wishes can be realized - both financially and time-independently.

The Wireless Building can simply be controlled by a tablet or smartphone with the GFVS software.

40 Jahre

*Integrate  
comfort!*

Several comfort functions are easily integrated into the existing installation.

Wireless sensors detect movements in the room and thus automatically switch to the desired lighting. Likewise, they are great energy savers: If you leave the room, the lighting will also be switched off.

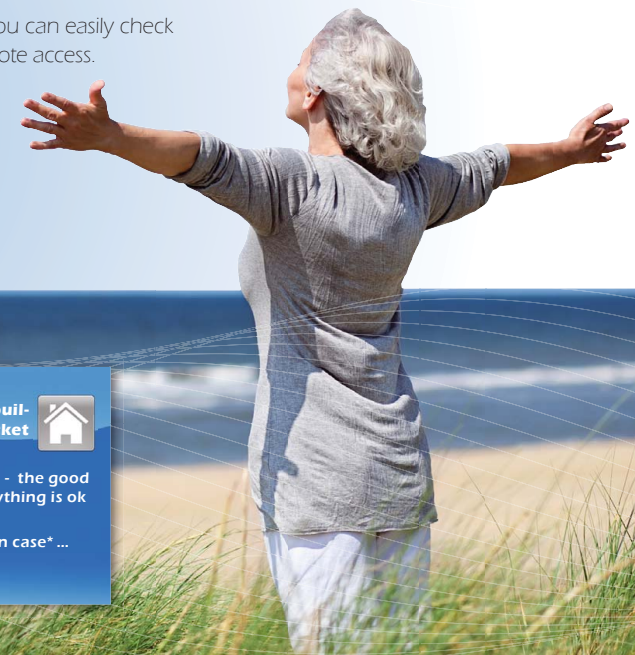

In addition, light scenes provide a homely atmosphere and can be selected depending on the mood.

*Even if you are out -  
you are at home ...  
enjoy retirement*

Time switches let your home look occupied - even when nobody is at home. Time- or sensor-controlled functions switch the lights on and off and move the blinds up and down.

Whether everything is fine at home, you can easily check from a distance - thanks to mobile remote access.

**Keeping the building in the pocket**

Always on the go - the good feeling that everything is ok at home.

I will check, just in case\* ...

\* It's so simple using my smartphone or tablet while I'm away from home.

Especially older people want  
safety and security

Our goal is to live independently in  
a familiar environment as long as its  
possible.  
Various applications help to realise this  
wish.

The Eltako Wireless Building provides this security  
in a simple way: The batteryless transmitters can  
be placed anywhere within reach. When pushing  
or pulling they send a wireless signal, which indi-  
cates a possible emergency via LED. In addition,  
nursing staff and family can be notified via SMS or  
e-mail.

**01 Central pushbutton ON / OFF**

When leaving the house everything is simply turned off  
with the central pushbutton. This provides security and  
saves energy.

**02 Panic pushbutton**

The panic button on the bedside table promises a good  
night's sleep. If you hear noises in the house at night-  
you simply press the button and it turns the whole  
lighting on!

**03 Window monitoring**

Are all windows closed? Thanks to the simple window  
monitoring you or your relatives receive a notification in  
case something was forgotten when leaving the house.

The Wireless Building  
is AAL ready!

The term AAL (ambient assisted living) is understood as the age-based housing  
with intelligent technology equipped environment. The Eltako Wireless  
Building permits an age-appropriate multi-functional and supported living,  
thanks to flexible wireless sensors and actuators.

It's the little things that make  
the whole perfect

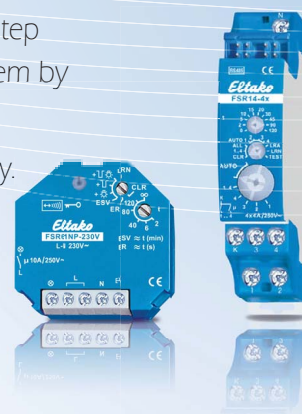

**Eltako**  
ELECTRONICS

Start with a basic system comprising light, sunshading, heating, etc. and simply expand step by step in compliance with your personal needs! End up with a complete control system by visualising and networking individual functions immediately or at a later date.

Increase your living comfort and save energy costs compared to conventional technology.

Ask your electrician !
