

FMMS44SB

Wireless mini multi sensor pure white glossy 44 x 44 x 16 mm. With integrated solar cell and battery CR1632 (not included in the scope of supply). Smart Home Sensor.

This multi sensor comprises sensors for temperature, humidity, lighting, acceleration and magnetic contact all integrated in a single housing. It sends all data via EnOcean wireless to the Eltako Wireless Building system. The integrated solar cell generates the necessary power from ambient light in rooms. Power is then stored internally to allow the multi sensor to operate for several days without light. The multi sensor has an NFC interface so that it can be configured by NFC reader, smartphone or tablet. In its as-delivered state, the EEP: D2-14-41 is enabled and contains the data of all sensors. The sensor parameters can be edited via the NFC interface and individual EEPs can be selected: A5-04-03, A5-02-05, A5-06-02, A5-06-03, A5-14-05 or D2-00-01.

FMMS44SB	Wireless mini multi sensor, pure white glossy	EAN 4010312321676	88,90 €/pc.
