

## FSRP-230V

**1- and 2-level wireless socket repeater. Only 0.7 watt standby loss.**

Adapter for German Socket (Typ F). With increased shock protection.

This repeater is only needed if the building conditions do not allow undisturbed reception or the distance between the wireless pushbutton and receiver is too great.

The 2-level mode is activated ex works. Sensor wireless signals are then processed in addition to the wireless signals of another 1-level repeater. A wireless signal can then receive and amplify a maximum of two times.

**From production week 31/18:** By multiple unplugging and plugging can be switched to the 1-level mode. Now only the wireless signals from sensors are received and amplified. Wireless signals from other repeaters are ignored to reduce the amount of data.

**Activate 1-level mode:**

Briefly unplug and replug the adapter plug 3 times at intervals of 1 second within a period of 10 seconds.

**Activate 2-level mode:**

Briefly unplug and replug the adapter plug 5 times at intervals of 1 second within a period of 20 seconds.

Wireless repeaters need not be taught-in. They receive and amplify signals from all wireless sensors within their reception area.

WEEE-Reg.-Nr. DE 30298319
