

## GFVS-Comm

### **Data communication packet M2M for the Smart Home control units SafeIV und PowerSafeIV with GSM modem. With a data flat rate for 2 years.**

Provided an internet access exists, external communication between the SafeIV and PowerSafeIV with GSM modem and the software GFVS 4.0 and smartphones and tablet PCs are charged by their flat rates. GFVS-Comm is not required for this.

**However, if data exchange is without local internet access, the standard M2M card running GFVS-Comm integrated in the GSM modem must be activated to exchange data over the mobile radio network.**

The GFVS-Comm therefore receives prepared M2M contracts with a data flat rate for two years. Access contracts are offered automatically.

**GSM** is the Global System for Mobile Communications which is used for mobile radio (D and E networks in Germany) and to exchange data packets.

The M2M card is activated shortly after receipt of a data flat rate contract.

This communication is encrypted to a very high standard and is very simple to configure with the new **Eltako quickcon® technology**.
