

The Wireless Building

Explore the possibilities of the Eltako Wireless Building and offer your customers the most diverse solutions in the building installation.

Benefiting from EnOcean technology the low maintenance and easy to install system offers significant competitive advantages over a wired installation.

For a quick start there are three useful wireless sets available.

Start with these basic options and then expand without any problems step by step as needed. Compared to a conventional solution you can increase your living comfort and reduce energy costs.

The blister pack "shading" consists of a batteryless and wireless pushbutton **FT55** in pure white glossy and a wireless actuator for shading elements and roller shutters **FSB61NP-230V**.

The blister pack "dimming" consists of a batteryless and wireless pushbutton **FT55** in pure white glossy and an universal dimmer switch **FUD61NPN-230V**. The dimmer automatically recognizes the lamp type and allows the adjustment of the minimum brightness and dimming speed.

The blister pack "switching" consists of a batteryless and wireless pushbutton **FT55** in pure white glossy as well as a switching actuator **FSR61-230V** with integrated relay function.
