## ROOM TEMPERATURE? WE CONTROL.

The wireless temperature controller for standard and underfloor heating ensures optimal temperatures in every home!

The current temperature can be read off the display and the exact desired temperature can be set. In addition, controlling via smartphone in conjunction with a smart home controller makes operating the controller child's play. This also results in the advantage of allowing other intelligent products to work together "under one roof". In this way, simple control processes are automated and the regulation of room temperatures becomes a matter of course.
