b) Bistable relay as relay contact. After installation, wait for short automatic synchronisation before teaching-in the wireless pushbuttons.

1) Applies to lamps of max. 150 W .
${ }^{2)}$ Generally applies to 230 V LED lamps and energy saving lamps (ESL). Due to different lamp electronics, switch on/off problems and a restriction in the maximum number of lamps, however, the dimming
ranges may be limited depending on the manufacturer; in particular when the connected load is very low (e.g. with 5 W LEDs).
${ }^{3)}$ No inductive (wound) transformers.

Eltako Wireless is based on the En0cean wireless standard for 868 MHz , frequency 868.3 MHz , data rate $\mathbf{1 2 5} \mathbf{k b p s}$, modulation mode ASK, max. transmit power 7 dBm ( $<10 \mathrm{~mW}$ ).

To comply with DIN VDE 0100-443 and DIN VDE 0100-534, a Type 2 or Type 3 surge protection device (SPD) must be installed.
