1) Applies to lamps of max. 150 W .
${ }^{2)}$ Also transformers electronically (Cload).
${ }^{3)}$ Generally applies to 230 V LED lamps. Due to different lamp electronics, switch on/off problems and a restriction in the maximum number of lamps, however, the dimming ranges may be limited depending on the manufacturer; in particular when the connected load is very low (e.g. with 5 W LEDs). The comfort position LC1 at SAMDU optimizes the dimming range, which however results in a maximum capacity of only up to 150 W . In this comfort position, no wound (inductive) transformers should be dimmed.
2) Fluorescent lamps or LV halogen lamps with electronic ballast.
${ }^{5)}$ All actuators with 2 contacts: Inductive load $\cos \varphi=0.6$ as sum of both contacts 1000 W max
3) A maximum of 2 transformers of the same type.
*EVG = electronic ballast units; KVG = conventional ballast units
