*EVG = electronic ballast units; KVG = conventional ballast units
${ }^{11}$ Applies to lamps with max. 150 W . ${ }^{2 /}$ A 40 -fold inrush current must be expected for electronic ballast devices. ${ }^{3}{ }^{3}$ When using $D X$ types close attention must be paid that zero passage switching is activated! ${ }^{4 /}$ Standby loss at 24 V approx. two times greater than at 12 V . ${ }^{5}$ Usually applies for dimmable 230 V LED lamps and dimmable energy saving lamps. Due to differences in the lamps electronics, there may be a restriction on the maximum number of lamps; especially if the connected load is very low (for 5W-LEDs).

To comply with DIN VDE 0100-443 and DIN VDE 0100-534, a Type 2 or Type 3 surge protection device (SPD) must be installed.
