iRidium mobile iBezel/iTop driver available!

iRoom GmbH is excited to announce a new iBezel/iTop integration again. After great efforts of the iRidium mobile software development team, iRoom is happy to announce availability of integration for iRidium mobile.

The modules are examples of modules to control equipment. Soon the modules will be presented as drivers for regular use in iRidium Studio. But even now if you know JavaScript you can use the code of the modules in your projects.

The module available here: <http://www.iridiummobile.net/download/software/v3/#tab2>

In case of integration questions please contact iRidium mobile support team:
<http://www.iridiummobile.net/support/>

This integration also works with iRoom's iTop (limited functions)
